Complement Therapeutics John D. Lambris, V. Michael Holers, Daniel Ricklin, 2012-09-19 This book highlights progress and trends in the rapidly evolving field of complement-related drug discovery and spotlights examples of clinical applications. As an integral part of innate immunity and critical mediator in homeostatic and inflammatory processes, the human complement system has been identified as contributor to a large number of disorders including ocular, cardiovascular, metabolic, autoimmune, and inflammatory diseases as well as in ischemia/reperfusion injury, cancer and sepsis. In addition, complement is often involved in adverse immune reactions to biomaterials, cell and organ transplants or drug delivery systems. Although the complement cascade with its close to 50 extracellular protein targets has long been recognized as an attractive system for therapeutic modulation, the past few years have seen a particularly strong boost in interest. Fueled by novel research insight and the marketing of the first complement-targeted drugs, a plethora of highly creative treatment approaches and potent drug candidates have recently emerged and are currently evaluated in disease models and clinical trials. The chapters in this book cover a wide range of topics related to the development of complement therapeutics, ranging from the molecular and functional description of complement targets to the presentation of novel inhibitors, improved treatment strategies as well as examples of disease models and clinical applications. The broad and up-to-date overview on a highly versatile and dynamic field renders this book an indispensable source of information for researchers and clinicians dealing with therapeutic and disease-related aspects of the human complement system.

Addressing Sickle Cell Disease National Academies of Sciences, Engineering, and Medicine, Health and Medicine Division, Board on Population Health and Public Health Practice, Committee on Addressing Sickle Cell Disease: A Strategic Plan and Blueprint for Action, 2020-12-22 Sickle cell disease (SCD) is a genetic condition that affects approximately 100,000 people in the United States and millions more globally. Individuals with SCD endure the psychological and physiological toll of repetitive pain as well as side effects from the pain treatments they undergo. Some adults with SCD report reluctance to use health care services, unless as a last resort, due to the racism and discrimination they face in the health care system. Additionally, many aspects of SCD are inadequately studied, understood, and addressed. Addressing Sickle Cell Disease examines the epidemiology, health outcomes, genetic implications, and societal factors associated with SCD and sickle cell trait (SCT). This report explores the current guidelines and best practices for the care of patients with SCD and recommends priorities for programs, policies, and research. It also discusses limitations and opportunities for developing national SCD patient registries and surveillance systems, barriers in the healthcare sector associated with SCD and SCT, and the role of patient advocacy and community engagement groups.

Acute and Emergency Care in Athletic Training Michelle Cleary, Katie Walsh Flanagan, 2019-03-01 Athletic trainers are often the first ones on the scene when an individual sustains an acute injury. Therefore, knowing how to assess injuries and illnesses and begin treatment quickly is of vital importance for aspiring athletic trainers. Acute and Emergency Care in Athletic Training With Web Study Guide teaches students how to recognize and manage emergency conditions so they can provide appropriate patient care between the field and the emergency department. Authors Michelle Cleary and Katie Walsh Flanagan take an interdisciplinary approach, drawing from literature, position statements, and guidelines from numerous professional health care organizations to offer current evidence-based clinical best practices. The book's comprehensive coverage adheres to and incorporates

guidelines from the Commission on Accreditation of Athletic Training Education (CAATE) and the Board of Certification (BOC), and it is one of the first textbooks to align with the competencies outlined in the CAATE 2020 standards. To prepare students to effectively provide appropriate care before getting an injured or ill athlete to the hospital, Acute and Emergency Care in Athletic Training includes the following learning aids: • Case studies in the web study guide offer practical scenarios that will facilitate critical thinking and decision-making skills. • Clinical Skills sidebars guide students through the process of completing specific tasks such as splinting, wound care, and airway maintenance. • Red Flag sidebars indicate areas where significant caution is warranted. • Decision-making algorithms and decision trees lead students through selecting the most appropriate treatment option based on a patient's signs and symptoms. • Key terms are boldfaced in the text and are defined in the glossary section. With a full-color presentation and more than 280 photos and illustrations, the text takes a systematic approach to acute and emergency care, with the content divided into two parts. Part I provides critical information on prevention and risk management strategies, including developing an emergency action plan, conducting an emergency examination, and administering emergency medications. Part II then provides the basics of emergency evaluations, describing how to examine, treat, and manage common acute injuries and illnesses to limit the severity of these potentially life-threatening conditions. To aid instructors using Acute and Emergency Care in Athletic Training in the classroom, there is a full array of ancillaries, including a test package, an instructor guide with sample answers to the case study questions, and a presentation package plus image bank. When an athlete is injured on the field of play, time is of the essence. Acute and Emergency Care in Athletic Training is an invaluable resource for training and preparing the initial responders to recognize critical situations and treat the acutely injured or ill patient.
