Collisions at Sea Harry Hirst,2021-01-29 It has been over forty years now since the present International Regulations for Preventing Collisions at Sea—the Collision Regulations—came into force. It's been over forty years in which there have been considerable technological improvements in ship design and equipment. Despite these improvements, however, mariners are still having collisions; and marine lawyers are still being called upon to settle liability for these collisions. Understanding how the courts interpret the Collision Regulations and apportion liability, therefore, will benefit both the mariner and the marine lawyer and all those involved in teaching the rules and investigating the causes of collisions at sea. This book is for you.

Chemistry 2e Paul Flowers,Richard Langely,William R. Robinson,Klaus Hellmut Theopold,2019-02-14 Chemistry 2e is designed to meet the scope and sequence requirements of the two-semester general chemistry course. The textbook provides an important opportunity for students to learn the core concepts of chemistry and understand how those concepts apply to their lives and the world around them. The book also includes a number of innovative features, including interactive exercises and real-world applications, designed to enhance student learning. The second edition has been revised to incorporate clearer, more current, and more dynamic explanations, while maintaining the same organization as the first edition. Substantial improvements have been made in the figures, illustrations, and example exercises that support the text narrative. Changes made in Chemistry 2e are described in the preface to help instructors transition to the second edition.

Advances in the Collision and Grounding of Ships and Offshore Structures Hervé Le Sourné,Carlos Guedes Soares,2023-09-11 This book offers state-of-the-art developments in the collision and grounding of ship and offshore structures. The topics covered by the contributions include: dynamics of vessels in collision and grounding; collision and grounding in Arctic conditions; collision and grounding statistics and measures of the probability of incidents; risk assessment of collision and grounding; measures for reduction of collision and grounding, machine learning methods for the evaluation of probabilistic collision and grounding risk; new designs for improvement of structural resistance to collisions; analysis of ultimate strength of damaged ship structures; design of buffer bows to reduce collision consequences; innovative navigation systems for safer sea transportation, collision between ships and offshore structures; collision between ships and fixed or floating bridges, collision and grounding experiments; properties of materials under impact loadings; residual strength of damaged ships and offshore structures; hull girder response of ships under severe dynamic loadings. The book is aimed at naval architects, marine engineers and scientists. The ICCGS

conferences aim to present state-of-the-art methods for analysis and design against collision and grounding of ships, collisions between ships and icebergs, offshore structures, bridges, submerged tunnels and waterfront structures. Previous conferences were held in: San Francisco, USA in 1996; Copenhagen, Denmark in 2001; Tokyo, Japan in 2004; Hamburg, Germany in 2007; Helsinki, Finland in 2010; Trondheim, Norway in 2013; Ulsan, South Korea in 2016, and Lisbon, Portugal in 2019. The Proceedings in Marine Technology and Ocean Engineering series is devoted to the publication of proceedings of peer-reviewed international conferences dealing with various aspects of 'Marine Technology and Ocean Engineering'. The Series includes the proceedings of the following conferences: the International Maritime Association of the Mediterranean (IMAM) Conferences, the Marine Structures (MARSTRUCT) Conferences, the Renewable Energies Offshore (RENEW) Conferences and the Maritime Technology (MARTECH) Conferences, and the Collision and Grounding of Ships and Offshore Structures (ICCGS) conferences. The 'Marine Technology and Ocean Engineering' series is also open to new conferences that cover topics on the sustainable exploration and exploitation of marine resources in various fields, such as maritime transport and ports, usage of the ocean including coastal areas, nautical activities, the exploration and exploitation of mineral resources, the protection of the marine environment and its resources, and risk analysis, safety and reliability. The aim of the series is to stimulate advanced education and training through the wide dissemination of the results of scientific research.

The Blame Machine: Why Human Error Causes Accidents Robert Whittingham, 2004-02-18 The Blame Machine describes how disasters and serious accidents result from recurring, but potentially avoidable, human errors. It shows how such errors are preventable because they result from defective systems within a company. From real incidents, you will be able to identify common causes of human error and typical system deficiencies that have led to these errors. On a larger scale, you will be able to see where, in the organisational or management systems, failure occurred so that you can avoid them. The book also describes the existence of a 'blame culture' in many organisations, which focuses on individual human error whilst ignoring the system failures that caused it. The book shows how this 'blame culture' has, in the case of a number of past accidents, dominated the accident enquiry process hampering a proper investigation of the underlying causes. Suggestions are made about how progress can be made to develop a more open culture in organisations, both through better understanding of human error by managers and through increased public awareness of the issues. The book brings together documentary evidence from recent major incidents from all around the world and within the Rail, Water, Aviation, Shipping, Chemical and Nuclear industries. Barry Whittingham has worked as a senior manager, design engineer and consultant for the chemical, nuclear, offshore oil and gas, railway and aviation sectors. He developed a career as a safety consultant specializing in the human factors aspects of accident causation. He is a member of the Human Factors in Reliability Group, and a Fellow of the Safety and Reliability Society.

Improving the Continued Airworthiness of Civil Aircraft National Research Council, Division on Engineering and Physical Sciences, Commission on

Engineering and Technical Systems, Committee on Aircraft Certification Safety Management, 1998-09-11 As part of the national effort to improve aviation safety, the Federal Aviation Administration (FAA) chartered the National Research Council to examine and recommend improvements in the aircraft certification process currently used by the FAA, manufacturers, and operators.

Serious Accidents and Human Factors Masako Miyagi, 2005 There is growing concern globally over issues of aviation safety. Awareness of previous failures and their causes is one of the most important factors in determining risks and hazards in any new operational systems. This requires experience of accidents and failures across a broad spectrum of complex systems. Every accident occurs as a result of a chain of errors, and if one of the links making up that chain can be broken, the accident might be prevented - and becomes merely an incident. If you collect detailed data from a range of incidents, relating to how they occurred, and develop a consistent method for analyzing that data, you can create a potentially valuable resource to assist in accident prevention. *Serious Accidents and Human Factors* proposes an original and structured approach to accident prevention. In an interesting and readable collection of accounts of major accidents, drawn mainly from the aviation industry, Masako Miyagi investigates incident reports analytically and reveals the critical information hidden therein that could avert a full-blown accident or disaster. She applies an innovative analytical technique - multidimensional analysis of incident reports (MAIR), using Quantification Method III to validate the results and focus upon individual components identified within the causal chain of events that precede an accident. She advocates wider acceptance and use of the Incident Report Analysing System, ideally administered by a neutral and independent body, to help prevent accidents not only in aviation but in relation to all complex systems, such as nuclear power plants. *Serious Accidents and Human Factors* offers aviation industry personnel, as well as those involved more generally with safety, risk assessment, and accident prevention in other industries, a comprehensive understanding of the accident causation chain, events contributing to that chain, and a method for identifying and eliminating causal factors in a pro-active way. Train Accidents Arnulfo Joerling, 2021-07-17 Train accidents or railroad collisions aren't as common as other transportation accidents, which perhaps is why they aren't viewed as a major threat. Although railroads aren't used as often as they were in centuries past, they still remain quite active. In fact, trains are still quite common in the US - particularly subways, commuter trains, trams, etc. In the United States alone, there are approximately 600 railroads, hundreds of thousands of miles of tracks, and over 209,000 railroad crossings. Citizen-advocate, the author spent twenty years investigating the causes behind railroad collisions. What he discovered is a tangled mess of both inadvertent and intentional mismanagement. In this book, he reveals his findings. He faults the railroads

themselves for poor risk management, but the industry is by no means the only culpable party. The Federal Railroad Administration's timid dealings with railroad companies impairs meaningful changes, while the National Transportation Safety Board's findings in many of their accident investigations are woefully, fatally incorrect. From commuter train collisions to engineer fatigue and a nationwide epidemic of incorrectly set safety crossing lights, the author paints a picture of an industry willing to put complacency ahead of safety, often actively working against positive change. The author supports his arguments with concrete examples. His interviews with locomotive engineers and a former safety director are thought-provoking and hard-hitting, while discussions with the parents of children killed in preventable railroad accidents provide a compassionate glimpse into the human cost of mismanaged risk.
