Infrared Nanophotonics Tadaaki Nagao, 2021-04-21 Infrared light radiates from almost all the matter on earth, and its strategic use will be an important issue for the enhancement of human life and the sustainable development of modern industry. Since its frequency is in the same region as phonons or molecular vibrations of materials, measuring its emission or absorption spectra helps us in characterizing and identifying materials in a non-destructive manner. Meanwhile, if we can spectroscopically design infrared emission by tuning chemical composition or artificially controlling nano- to mesoscale structures, this will have a great impact on industrial applications, such as thermophotovoltaics, energy-saving drying furnaces, spectroscopic infrared light sources, and various types of infrared sensors. In this Special Issue, we encourage submissions from researchers who are working on infrared nanophotonics based on MEMS/NEMS, and nanomaterials science, ranging from materials synthesis, to device fabrications, electromagnetic simulations, and thermal managements. Important topics of growing interest are wavelength-selective infrared emitters and detectors, where we can see rapid development in the fields of nano-plasmonics and metamaterials, and we invite such topics for inclusion in this Special Issue. We also encourage submissions on nanomaterials science such as on graphene-based infrared detectors/emitters, and nanostructured narrow-band gap semiconductors.

Probabilistic Mechanical Design Edward B. Haugen, 1980-11-07 Focuses on the problem of engineering design based on the behavior of random variables. Gives numerous examples for determining reliability specifications in which both over- and under-designing can be avoided. Presents design methods that be adapted to nuclear, electrical and mining engineering as well as mechanical engineering specialities.

Anticancer Agents Qiao-Hong Chen, 2021-03-02 This book is a printed edition of the Special Issue entitled "Anticancer Agents: Design, Synthesis and Evaluation" that was published in Molecules. Two review articles and thirty research papers are included in the Special Issue. Three second-generation androgen receptor antagonists that have been approved by the U.S. FDA for the treatment of prostate cancer have been reviewed. Identification of mimics of protein partners as protein-protein interaction inhibitors via virtual screening has been summarized and discussed. Anticancer agents targeting various protein targets, including IGF-1R, Src, protein kinase, aromatase, HDAC, PARP, Toll-Like receptor, c-Met, PI3Kdelta, topoisomerase II, p53, and indoleamine 2,3-dioxygenase, have been explored. The analogs of three well-known tubulin-interacting natural products, paclitaxel, zampanolide, and colchicine, have been designed, synthesized, and evaluated. Several anticancer agents representing diverse chemical scaffolds were assessed in different kinds of cancer cell models. The capability of some anticancer agents to overcome the resistance to currently available drugs was also studied. In addition to looking into the in vitro ability of the anticancer agents to inhibit cancer cell proliferation, apoptosis, and cell cycle, in vivo antitumor efficacy in animal models and DFT were also investigated in some papers.

RNA Methylation Alexandra Lusser, 2017-03-28 This volume provides a comprehensive collection of current methods and protocols to study posttranscriptional base modifications in RNA with special focus on methylation. The protocols in this book discuss state-of-the-art methods for investigating aspects of RNA methylation on different types of RNA. The protocols cover topics such as wet-lab techniques for the detection of methylation, instructions for bioinformatics analyses of transcriptome-scale data, and protocols for the functional examination of RNA modifications and enzymes. Written in the highly successful Methods in Molecular Biology series format, chapters

include introductions to their respective topics, lists of the necessary materials and reagents, step-by-step, readily reproducible laboratory protocols, and tips on troubleshooting and avoiding known pitfalls. Cutting-edge and thorough, RNA Methylation: Methods and Protocols is a valuable resource for biochemists and molecular biologists, from various fields, who wish to investigate different types of RNA methylations.
