Coastal Zone Planning and Management Institution of Civil Engineers (Great Britain),1992 The objective of coastal management is the preservation of coastal resources whilst simultaneously satisfying the sometimes conflicting interests and requirements of protection, development, usage and conservation. Given the ever increasing awareness of coastal planning and management on an integrated basis this volume compounds the general change in perspective.

The Challenge of Integration Peter Rutland,1998 The EastWest Institute took over sponsorship of the Survey when the Open Media Research Institute in Prague closed in 1997 after publishing the first two annual volumes. Overviews of eastern Europe and the former Soviet states are followed by essays on regional issues and economics, and then analyses of the current situation in specific countries. The perspectives include a year of optimism in Hungary, keeping Latvia on a course toward the west, Slovenia as an island of stability, a year of western determination in Bosnia, Vojislav Sesilj as a demagogue waiting in Yugoslavia, and progress amid privation in Georgia. The texts are accompanied by maps, data boxes, feature stories, excerpts from documents, and profiles of key figures. Annotation copyrighted by Book News, Inc., Portland, OR

Intellectual Property and Genetic Resources, Traditional Knowledge and Traditional Cultural Expressions World Intellectual Property Organization,2020-07-08 General information on the interface between intellectual property (IP) and traditional knowledge (TK), traditional cultural expressions (TCEs), and genetic resources (GRs). It briefly addresses the most important questions that arise when considering the role that IP principles and systems can play in protecting TK and TCEs from misappropriation, and in generating and equitably sharing benefits from their commercialization, and the role of IP in access to and benefit sharing in GRs.

Underwater Seascapes Olivier Musard,Laurence Le Dû-Blayo,Patrice Francour,Jean-Pierre Beurrier,Eric Feunteun,Luc Talassinos,2014-03-24 While the European Landscape Convention adopted in Florence in 2000 by the European Council offers a public-action framework through a normative definition, the marine and submarine dimensions of landscapes are attracting growing interest from researchers worldwide. At a time when marine-conservation objectives are strongly endorsed by the Convention on Biological Diversity, the French Marine Protected Areas Agency, a public institution under the governance of the French Ministry of the Environment, has gathered prominent experts to draft the very first interdisciplinary overview of underwater seascapes, so as to initiate and lend direction to a wider reflection on this emerging research topic.

Technology and Applications of Autonomous Underwater Vehicles Gwyn Griffiths,2002-11-28 The oceans are a hostile environment, and gathering information on deep-sea life and the seabed is incredibly difficult. Autonomous underwater vehicles are robot submarines that are revolutionizing the way in which researchers and industry obtain data. Advances in technology have resulted in capable vehicles that have made new discoveries on how th

A Citizens Guide to Plastics in the Ocean Kathryn O'Hara,Suzanne Iudicello,Rose Bierce,1988 This publication gives an overview of the problems caused by plastic debris in the marine environment and describes how citizens and public officials are working together to solve these problems. Chapter I introduces the reader to the problems caused by plastic debris in the marine environment. Chapter II examines the types of debris that are known to cause the most severe problems. Chapter III discusses both the ocean and land-based sources of plastic debris. Chapter IV examines international, federal, and state authorities governing the disposal of plastics in the oceans, particularly entanglement of marine species in discarded plastic materials. Chapter V details how the problems caused by plastic debris are being addressed, and Chapter VI suggests ways that citizens can participate in these efforts. Chapter VII discusses the implications and scope of the problem for the future. Lists of agencies, people, organizations, reports, and other information are appended. (YP)

Marine Debris James M. Coe,Donald Rogers,2012-12-06 Marine debris is a global pollution problem affecting marine life, maritime commerce and environmental quality. Scientists, policymakers and the public must be knowledgeable about the source, impact and control efforts if effective solutions are to be developed. Marine Debris addresses the origin of persistent solid waste in the ocean, from urban and rural discharges to waste from ships and the recreational use of oceans. The book identifies key issues from biological, technological, economic and legal perspectives, and gives a framework for controlling each of the main sources of marine debris.

Evolution of Marine Coastal Ecosystems under the Pressure of Global Changes Hubert-Jean Ceccaldi,Yves Hénocque,Teruhisa Komatsu,Patrick Prouzet,Benoit Sautour,Jiro Yoshida,2021-06-16 Coastal and estuarine environments at the interface of terrestrial and marine areas are among the most productive in the world. However, since the beginning of the industrial era, these ecosystems have been subjected to strong anthropogenic pressures intensified from the second half of the 20th century, when there was a marked acceleration in the warming (climate change) of the continents, particularly at high latitudes. Coastal ecosystems are highly vulnerable to alteration of their physical, chemical and biological characteristics (marine intrusion, acidification of marine environments, changes in ecosystems, evolution and artificialization of the coastline, etc.).In contact with heavily populated areas, these environments are often the receptacle of a lot of chemical and biological pollution sources that significantly diminish their resilience. In this context of accelerated evolution and degradation of

these areas important for food security of many populations around the world, it is necessary to better identify the factors of pressure and understand, at different scales of observation, their effects and impacts on the biodiversity and on the socio-eco-systems, in order to determine the degree of vulnerability of these coastal ecosystems and the risks they face. A transdisciplinary and integrated approach is required to prevent risks. Within this framework, operational coastal oceanography occupies an important place but also the implementation of a true socio-eco-system approach in order to set up an environmentally friendly development.

Mixing in Inland and Coastal Waters Hugo B. Fischer, John E. List, C. Robert Koh, Jorg Imberger, Norman H. Brooks, 2013-10-22 This book is an outgrowth of research contributions and teaching experiences by all the authors in applying modern fluid mechanics to problems of pollutant transport and mixing in the water environment. It should be suitable for use in first year graduate level courses for engineering and science students, although more material is contained than can reasonably be taught in a one-year course, and most instructors will probably wish to cover only selected portions. The book should also be useful as a reference for practicing hydraulic and environmental engineers, as well as anyone involved in engineering studies for disposal of wastes into the environment. The practicing consulting or design engineer will find a thorough explanation of the fundamental processes, as well as many references to the current technical literature, the student should gain a deep enough understanding of basics to be able to read with understanding the future technical literature evolving in this evolving field.

Biodiversity II A Joseph Henry Press book, 1996-09-16 The book before you...carries the urgent warning that we are rapidly altering and destroying the environments that have fostered the diversity of life forms for more than a billion years. With those words, Edward O. Wilson opened the landmark volume *Biodiversity* (National Academy Press, 1988). Despite this and other such alarms, species continue to vanish at a rapid rate, taking with them their genetic legacy and potential benefits. Many disappear before they can even be identified. *Biodiversity II* is a renewed call for urgency. This volume updates readers on how much we already know and how much remains to be identified scientifically. It explores new strategies for quantifying, understanding, and protecting biodiversity, including: New approaches to the integration of electronic data, including a proposal for a U.S. National Biodiversity Information Center. Application of techniques developed in the human genome project to species identification and classification. The Gap Analysis Program of the National Biological Survey, which uses layered satellite, climatic, and biological data to assess distribution and better manage biodiversity. The significant contribution of museum collections to identifying and categorizing species, which is essential for understanding ecological function and for targeting organisms and regions at risk. The book describes our growing understanding of how megacenters of diversity (e.g., rainforest insects, coral reefs) are formed, maintained, and lost; what can be learned from mounting bird extinctions; and how conservation efforts for neotropical primates have fared. It also explores ecosystem restoration, sustainable development, and agricultural impact. *Biodiversity II* reinforces the idea that the conservation of our biological resources is within reach as long as we pool resources; better coordinate the efforts of existing institutions—museums, universities, and government agencies—already dedicated to this goal; and enhance support for research, collections, and training. This volume will be important to environmentalists, biologists, ecologists, educators, students, and concerned individuals.
